ATOMWALK®

Seafood Industry ERP

Streamlining Seafood Operations from Order to Cash

ATOMWALK®

Why Seafood Businesses Need ERP

The seafood industry operates in one of the most complex supply chains — from Order management and Inventory facilities to processing plants and timely Shipment . Managing these operations manually often leads to inefficiencies, data lose, and costly errors.

ATOMWALK ERP: Built for the Seafood Industry

Our ERP application is designed specifically to address these challenges. It integrates every stage of seafood operations into a single, unified platform ensuring **transparency**, **efficiency**, and **scalability**.

ATOMWALK®

Key Features

Our ERP brings automation and intelligence to every stage of seafood industry workflows. From procurement to production, it ensures efficiency, accuracy, and transparency — helping businesses stay competitive in a fast-moving market.

Procurement Plan Recommendation

- Streamline purchasing decisions with system-driven procurement schedules, ensuring timely supply of raw materials and reducing costs.

Daily Production Plan Recommends

- Generate optimized daily production schedules based on demand, workforce availability, and machine capacity.

Yield Variance Tracking

- Monitor yield performance across stages, identify inefficiencies, and minimize wastage with actionable insights.

Supplier & Workforce Management

- Manage supplier profiles, contracts, and workforce allocation seamlessly, ensuring smooth coordination across the supply chain.

Batch Traceability

- Track every batch from procurement to delivery with complete visibility into sourcing, processing, quality checks, and shipment history for improved compliance and faster issue resolution.

Inventory Monitoring

- Real-time tracking of stock levels, cold storage conditions, and grade availability to prevent shortages and maintain quality.

ATOMWALK®

Key Features

Order Risk Alerts

- Proactive notifications for delayed, high-risk, or resource-short orders to prevent disruptions.

Order Priority List

- Categorize orders as Critical, Urgent, or Normal to streamline fulfillment scheduling.

Quality matrix share

- Share standardized quality metrics, inspection reports, and compliance data with customers to ensure transparency, trust, and consistent product standards.

Bottleneck Machinery Indication

- Detect machinery bottlenecks in real time, ensuring smooth production flow.

Product-wise Yield Variation

- Manage supplier profiles, contracts, and workforce allocation seamlessly, ensuring smooth coordination across the supply chain.

Tally integration

- Seamlessly sync accounting, invoices, inventory, and financial transactions with Tally for accurate financial management and reduced manual effort.

ATOMWALK®

Core Modules

Smart order operation

- Manage customer orders seamlessly with priority-based processing , Intelligent tracking and streamlined sales workflows

Integrated Production workflow

- Drive efficient production with integrated quality check, grade workflows, segregation processes and production planning.

Strategic Sourcing & Procurement

- Simplify raw material procurement with demand-driven purchasing and smart procurement recommendations

Unified Inventory control

- Gain full visibility into stock levels, cold storage conditions, and grade distribution. Track reserved, available, and finished goods inventory seamlessly.

ATOMWALK®

Why Choose ATOMWALK?

Efficiency Through system driven

Easy repetitive tasks, reduce manual errors, and streamline workflows across your entire seafood supply chain.

Complete Transparency

Real-time visibility into operations, inventory levels, and compliance status ensures informed decision-making.

Easily Scalable

Grow your business confidently with a solution that scales and meets industry-specific regulatory requirements.
